First DALI-2 sensors and other input devices added to the Product Database
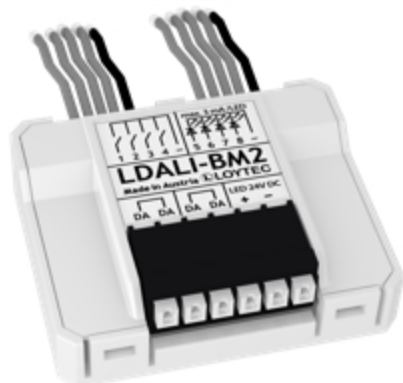

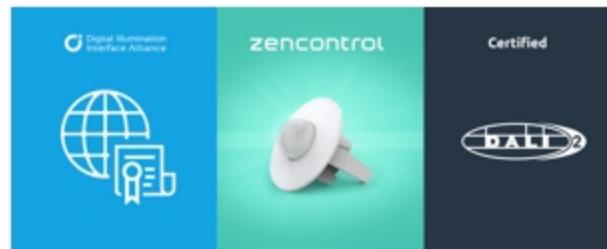

Following the addition of input devices to the DALI-2 certification program (see News), several more types of input device have been certified by DiiA members, including the first DALI-2 multi-sensor.

The first certified DALI-2 input device was a push-button device from Zencontrol, which implements Part 301 of the DALI-2 specification (see News).

Meanwhile, the LDALI-BM2 quadruple DALI push-button coupler (pictured right) from LOYTEC electronics GmbH was the first DALI-2 input device to implement more that one of the new Parts (301-304) of the DALI-2 specification. This product implements both Part 301 (push buttons) and Part 302 (absolute input devices such as switches or sliders).

Also, the first DALI-2 multi-sensor has now been added to the Certified Products database (this lists all certified DALI-2 products and registered DALI version-1 products).

Zencontrol's zc-pir is a combined occupancy (PIR) and light (lux) sensor, which implements Parts 303 and 304 of DALI-2.
