Loytec sensor nominated for Lux Awards 2018

The LDALI-MS2 multi-sensor from DiiA member Loytec has been nominated for the Lux Awards 2018. Forty projects and 50 products are included on the [Lux Awards shortlist](#).

The Loytec product is in the running for "Controls Product of the Year," which is awarded to "the most outstanding innovation in this sector including control systems, interfaces, control gear and sensors."

The Lux Awards 2018 will be presented on the evening of Thursday 15 November 2018, at the end of the LuxLive tradeshow. DiiA will exhibit at LuxLive, booth N35, and Scott Wade will make a presentation as part of the Property Technology Live conference. >> [More details](#).

Loytec describes the LDALI-MS2 as "a state-of-the-art, PIR-based presence and lux sensor optimized for typical office environments.

"All sensor information is provided via the DALI-2 protocol as defined in the IEC 62386 2014 standard. By following this well-established industry standard, Loytec ensures that the device can be easily integrated into DALI systems of other vendors. As the LDALI-MS2 is powered via the DALI bus, installation is simple and low-cost.

"The sensor's key innovations are the integrated temperature and humidity sensors, as well as three digital inputs to allow the connection of conventional switches and push-buttons as well as window contacts and other digital inputs."
