Delta Electronics Showcases Total Integration in Building Solutions at LIGHTFAIR 2019

By Kayte Gyles, Marketing Communications Specialist (Delta Controls)

LIGHTFAIR International is the leading tradeshow and conference for showcasing the latest technologies in the lighting and design industry. The three-day event, which took place this year in Philadelphia, focuses on solutions in lighting, connectivity and design.

Delta Controls participated by presenting the enteliWEB software platform, which integrates HVAC, access and lighting altogether in one. The enteliWEB software is not only a leading solution in making building controls more comfortable and easy to use, but it also reduces training costs by packaging everything into a single user-friendly interface.

Delta Controls also showcased the Delta integrated offerings with Delta Electronics and VIVOTEK's IP cameras. Delta Electronics' offerings work seamlessly with the Delta Controls' O3 System, which is a part of the enteliWEB platform – representing a complete solution for room management, comfort and control. The O3 System provides sensor fusion, accurate temperature readings and wireless expandability in one sleek hardware platform. This system is paving the way in eco-friendly controls by telling an HVAC system whether a room is occupied, making a significant impact on energy consumption.

LIGHTFAIR 2019 was an excellent opportunity to show off the most forward-thinking Delta Controls, Loytec and Delta Electronics products, illustrating the innovation and integration of our collective products.

Delta Controls Application Engineer, Dorota Belkowska, testing the enteliWEB app at our interactive booth.
